"As chip size and complexity continues to grow exponentially, the challenges of functional verification are becoming a critical issue in the electronics industry. It is now commonly heard that logical errors missed during functional verification are the most common cause of chip re-spins, and that the costs associated with functional verification are now outweighing the costs of chip design. To cope with these challenges engineers are increasingly relying on new design and verification methodologies and languages. Transaction-based design and verification, constrained random stimulus generation, functional coverage analysis, and assertion-based verification are all techniques that advanced design and verification teams routinely use today. Engineers are also increasingly turning to design and verification models based on C/C++ and SystemC in order to build more abstract, higher performance hardware and software models and to escape the limitations of RTL HDLs. This new book, *Advanced Verification Techniques*, provides specific guidance for these advanced verification techniques. The book includes realistic examples and shows how SystemC and SCV can be applied to a variety of advanced design and verification tasks."

From reader reviews:

Nettie Powers:

Book is to be different for every single grade. Book for children until adult are different content. As it is known to us that book is very important for us. The book Advanced Verification Techniques: A SystemC Based Approach for Successful Tapeout was making you to know about other understanding and of course you can take more information. It is rather advantages for you. The e-book Advanced Verification Techniques: A SystemC Based Approach for Successful Tapeout is not only giving you more new information but also to get your friend when you truly feel bored. You can spend your own spend time to read your e-book. Try to make relationship with the book Advanced Verification Techniques: A SystemC Based Approach for Successful Tapeout. You never feel lose out for everything should you read some books.

Frederica Dawkins:

Advanced Verification Techniques: A SystemC Based Approach for Successful Tapeout can be one of your beginner books that are good idea. We all recommend that straight away because this reserve has good vocabulary which could increase your knowledge in vocabulary, easy to understand, bit entertaining but nevertheless delivering the information. The copy writer giving his/her effort to set every word into joy arrangement in writing Advanced Verification Techniques: A SystemC Based Approach for Successful Tapeout nevertheless doesn't forget the main stage, giving the reader the hottest and based confirm resource data that maybe you can be one of it. This great information may drawn you into fresh stage of crucial contemplating.
