Here, in simple, straightforward language, is an exploration of the events and geologic processes responsible for the stunning beauty of the deserts, plateaus and mountains in the American Southwest. After a brief look at the basics of geology and archaeology, the reader is taken on hikes that feature the most interesting geologic structures and the sites inhabited by Paleo-Indians thousands of years before Christ. The twelve hikes range from desert preserves in the middle of Phoenix, Arizona to remote mountains in northern New Mexico. The spectacular scenery tells a story of volcanic forces and ancient seas that sculpted plateaus and drove up the largest of mountain ranges. Five geologically related hikes cover Arizona, three are in New Mexico and one in Utah. The last three hikes, all in New Mexico, focus on geology and archaeology, covering the entry of the first nomadic hunter-gatherers, and their prey, into the Southwest. The book ends with a basic guide to geologic concepts and an introduction to rock identification for those who wish to learn more.
