Textbook of Remote Sensing and Geographical Information Systems

Kali Charan Sahu

Textbook of Remote Sensing and Geographical Information Systems Kali Charan Sahu

Remote sensing technology in India started in the 1960s. Space technology was developed during the 1970s and 1980s to use satellites and sensors in the areas of communication to exploit meteorological and ground resources. Like some other developing countries, India could bypass the intermediate technology stage and leapfrog into the high technology area. Indias first satellite in IRS series was IRS-1A, launched in March 1988 by a Russian Vostok launch vehicle. Our space technology has attained momentum and made tremendous achievements by launching the Oceansat-1 for ocean resources monitoring; Resourcesat-1 for agricultural applications; and Cartosat-1 with a high resolution panchromatic camera for cartographic applications. In India, the remote sensing technology along with Geographic Information System (GIS) is widely being used for more than two decades for inventorying, mapping and monitoring of Earth resources, and for mitigation and management of natural disasters. In days to come it will become the most powerful tool for management and distribution of information for various purposes. This book is solely written to meet the requirements of undergraduate courses in B.E. (Civil Engineering), B.Tech (Geoinformatics), the postgraduate courses and M.Tech in Remote Sensing, Postgraduate Diploma in Remote Sensing and GIS, and M.E (Geoinformatics) of various universities and institutions. Topics are covered with adequate Tables and Illustrations essential to an introductory text. The book offers key concepts with the use of simple and limited mathematics. Digital Image Processing, which forms the backbone of the book, is dealt with special care. The book explains fundamental basis of GIS technology, spatial data modeling, attributes data management, GIS data analysis and modeling. It will also serve as an ideal reference book for researchers in this field and practical users of this technology.

From reader reviews:

Charles Davis:

Book is to be different for every single grade. Book for children right up until adult are different content. As it is known to us that book is very important for us. The book Textbook of Remote Sensing and Geographical Information Systems was making you to know about other know-how and of course you can take more information. It is rather advantages for you. The guide Textbook of Remote Sensing and Geographical Information Systems is not only giving you a lot more new information but also being your friend when you sense bored. You can spend your spend time to read your book. Try to make relationship using the book Textbook of Remote Sensing and Geographical Information Systems. You never really feel lose out for everything should you read some books.

Cari Sexton:

Reading can called brain hangout, why? Because if you find yourself reading a book mainly book entitled Textbook of Remote Sensing and Geographical Information Systems your thoughts will drift away trough every dimension, wandering in each and every aspect that maybe unidentified for but surely can become your mind friends. Imaging every single word written in a publication then become one type conclusion and explanation which maybe you never get prior to. The Textbook of Remote Sensing and Geographical Information Systems giving you a different experience more than blown away your head but also giving you useful details for your better life with this era. So now let us show you the relaxing pattern here is your body and mind will probably be pleased when you are finished reading through it, like winning a game. Do you want to try this extraordinary investing spare time activity?

Joseph Mattos:

Are you kind of hectic person, only have 10 or 15 minute in your morning to upgrading your mind ability or thinking skill even analytical thinking? Then you have problem with the book as compared to can satisfy your short space of time to read it because all this time you only find reserve that need more time to be go through. Textbook of Remote Sensing and Geographical Information Systems can be your answer because it can be read by an individual who have those short spare time problems.

Paulette Preston:

Many people spending their period by playing outside with friends, fun activity with family or just watching TV the whole day. You can have new activity to spend your whole day by looking at a book. Ugh, ya think reading a book can really hard because you have to take the book everywhere? It all right you can have the e-book, having everywhere you want in your Smartphone. Like Textbook of Remote Sensing and Geographical Information Systems which is obtaining the e-book version. So , why not try out this book? Let's observe.
