## Conservation in the Internet Age: Threats And Opportunities

Since the earliest days of our nation, new communications and transportation networks have enabled vast changes in how and where Americans live and work. Transcontinental railroads and telegraphs helped to open the West; mass media and interstate highways paved the way for suburban migration. In our own day, the internet and advanced logistics networks are enabling new changes on the landscape, with both positive and negative impacts on our efforts to conserve land and biodiversity. Emerging technologies have led to tremendous innovations in conservation science and resource management as well as education and advocacy efforts. At the same time, new networks have been powerful enablers of decentralization, facilitating sprawling development into previously undesirable or inaccessible areas. Conservation in the Internet Age offers an innovative, cross-disciplinary perspective on critical changes on the land and in the field of conservation. The book provides a general overview of the impact of new technologies and networks, explores the potentially disruptive impacts of the new networks on open space and biodiversity, presents case studies of innovative ways that conservation organizations are using the new networks to pursue their missions, considers how rapid change in the Internet Age offers the potential for landmark conservation initiatives. Conservation in the Internet Age is the first book to examine the links among land use, technology, and conservation from multiple perspectives, and to suggest areas and initiatives that merit further investigation. It offers unique and valuable insight into the challenges facing the land and biodiversity conservation community in the early twenty-first century, and represents an important new work for policymakers, conservation professionals, and academics in planning, design, conservation and resource management, policy, and related fields.
