Web History Tools and Revisitation Support: A Survey of Existing Approaches and Directions (Foundations and Trends(r) in Human-Computer Interaction) Matthias Mayer

Web History Tools and Revisitation Support summarizes existing knowledge about revisitations on the web, and surveys the potential of graphic based web history tools. A taxonomy of revisit-types distinguishes between short-, medium-, and long-term revisits, but also intra- and inter-session revisits. Assisted by a clear nomenclature this provides more clarity to the current discussion. The potential use of graphic based tools is analyzed and discussed with respect to the found categories. The value of the current, mainly non-graphical history tools, such as back button, bookmarks, history list, search engines, and search bars is examined and related to the potential offered by graphic based tools. Web History Tools and Revisitation Support provides summaries of key studies and bodies of research for those who are interested in improving the web users' experience by simplifying the processes of going back to resources visited seconds, minutes, hours, weeks, or even months ago. It is meant for developers and researchers, browser and search engine producers, web usability professionals, and those who feel an irresistible urge to creatively innovate the web. The time has come to design and offer more appropriate history support. This book provides a foundation, as well as valuable ideas for doing so.
