Nicholas Loehr

Bijjective Combinatorics (Discrete and Combinatorial Mathematics Series) Nicholas Loehr

Bijjective proofs are some of the most elegant and powerful techniques in all of mathematics. Suitable for readers without prior background in algebra or combinatorics, **Bijjective Combinatorics** presents a general introduction to enumerative and algebraic combinatorics that emphasizes bijective methods.

The text systematically develops the mathematical tools, such as basic counting rules, recursions, inclusion-exclusion techniques, generating functions, bijective proofs, and linear-algebraic methods, needed to solve enumeration problems. These tools are used to analyze many combinatorial structures, including words, permutations, subsets, functions, compositions, integer partitions, graphs, trees, lattice paths, multisets, rook placements, set partitions, Eulerian tours, derangements, posets, tilings, and abaci. The book also delves into algebraic aspects of combinatorics, offering detailed treatments of formal power series, symmetric groups, group actions, symmetric polynomials, determinants, and the combinatorial calculus of tableaux. Each chapter includes summaries and extensive problem sets that review and reinforce the material.

Lucid, engaging, yet fully rigorous, this text describes a host of combinatorial techniques to help solve complicated enumeration problems. It covers the basic principles of enumeration, giving due attention to the role of bijective proofs in enumeration theory.

From reader reviews:

Sandra Hughes:

In other case, little folks like to read book Bijective Combinatorics (Discrete and Combinatorial Mathematics Series). You can choose the best book if you love reading a book. Providing we know about how is important any book Bijective Combinatorics (Discrete and Combinatorial Mathematics Series). You can add information and of course you can around the world by a book. Absolutely right, simply because from book you can realize everything! From your country until eventually foreign or abroad you can be known. About simple matter until wonderful thing you may know that. In this era, we can open a book or searching by internet unit. It is called e-book. You should use it when you feel uninterested to go to the library. Let's learn.

Barbie Brookins:

Nowadays reading books are more than want or need but also be a life style. This reading behavior give you lot of advantages. The huge benefits you got of course the knowledge the rest of the information inside the book this improve your knowledge and information. The information you get based on what kind of guide you read, if you want attract knowledge just go with training books but if you want truly feel happy read one along with theme for entertaining for instance comic or novel. The particular Bijective Combinatorics (Discrete and Combinatorial Mathematics Series) is kind of reserve which is giving the reader unpredictable experience.

Dawn Campbell:

People live in this new day of lifestyle always try and and must have the extra time or they will get wide range of stress from both way of life and work. So , when we ask do people have extra time, we will say absolutely of course. People is human not really a huge robot. Then we ask again, what kind of activity do you possess when the spare time coming to you actually of course your answer will certainly unlimited right. Then do you ever try this one, reading textbooks. It can be your alternative within spending your spare time, typically the book you have read is usually Bijective Combinatorics (Discrete and Combinatorial Mathematics Series).

Charles Moreno:

Reading a guide make you to get more knowledge from that. You can take knowledge and information from your book. Book is composed or printed or descriptive from each source that filled update of news. In this particular modern era like currently, many ways to get information are available for you. From media social including newspaper, magazines, science guide, encyclopedia, reference book, novel and comic. You can add your knowledge by that book. Isn't it time to spend your spare time to open your book? Or just seeking the Bijective Combinatorics (Discrete and Combinatorial Mathematics Series) when you required it?
