## **Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series)** Gisele L. Pappa, Alex A. Freitas

Data mining is a very active research area with many successful real-world applications. It consists of a set of concepts and methods used to extract interesting or useful knowledge (or patterns) from real-world datasets, providing valuable support for decision making in industry, business, government, and science. Although there are already many types of data mining algorithms available in the literature, it is still difficult for users to choose the best possible data mining algorithm for their particular data mining problem. In addition, data mining algorithms have been manually designed; therefore they incorporate human biases and preferences. This book proposes a new approach to the design of data mining algorithms. Instead of relying on the slow and ad hoc process of manual algorithm design, this book proposes systematically automating the design of data mining algorithms with an evolutionary computation approach. More precisely, we propose a genetic programming system (a type of evolutionary computation method that evolves computer programs) to automate the design of rule induction algorithms, a type of classification method that discovers a set of classification rules from data. We focus on genetic programming in this book because it is the paradigmatic type of machine learning method for automating the generation of programs and because it has the advantage of performing a global search in the space of candidate solutions (data mining algorithms in our case), but in principle other types of search methods for this task could be investigated in the future.

### **From reader reviews:**

#### **Nancy Fisher:**

This Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series) are generally reliable for you who want to be a successful person, why. The reason why of this Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series) can be one of several great books you must have is actually giving you more than just simple reading through food but feed you actually with information that probably will shock your before knowledge. This book will be handy, you can bring it just about everywhere and whenever your conditions in e-book and printed people. Beside that this Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series) forcing you to have an enormous of experience like rich vocabulary, giving you trial of critical thinking that we realize it useful in your day pastime. So , let's have it and luxuriate in reading.

#### **Meredith Daugherty:**

The book untitled Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series) is the book that recommended to you to see. You can see the quality of the reserve content that will be shown to anyone. The language that author use to explained their way of doing something is easily to understand. The copy writer was did a lot of investigation when write the book, to ensure the information that they share for you is absolutely accurate. You also could possibly get the e-book of Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series) from the publisher to make you a lot more enjoy free time.

#### **Mamie Shaw:**

Your reading sixth sense will not betray an individual, why because this Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series) publication written by well-known writer whose to say well how to make book which can be understand by anyone who else read the book. Written in good manner for you, leaking every ideas and producing skill only for eliminate your hunger then you still doubt Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series) as good book but not only by the cover but also with the content. This is one book that can break don't judge book by its deal with, so do you still needing another sixth sense to pick this particular!/? Oh come on your looking at sixth sense already said so why you have to listening to yet another sixth sense.

#### **Jean Mora:**

As a student exactly feel bored for you to reading. If their teacher requested them to go to the library as well as to make summary for some e-book, they are complained. Just minor students that has reading's heart or real their leisure activity. They just do what the teacher want, like asked to the library. They go to there but

nothing reading significantly. Any students feel that looking at is not important, boring in addition to can't see colorful pics on there. Yeah, it is to be complicated. Book is very important to suit your needs. As we know that on this age, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore this Automating the Design of Data Mining Algorithms: An Evolutionary Computation Approach (Natural Computing Series) can make you truly feel more interested to read.
