The Future of Scientific Knowledge Discovery in Open Networked Environments: Summary of a Workshop Paul F. Uhler, Board on Research Data and Information, Policy and Global Affairs, National Research Council

Digital technologies and networks are now part of everyday work in the sciences, and have enhanced access to and use of scientific data, information, and literature significantly. They offer the promise of accelerating the discovery and communication of knowledge, both within the scientific community and in the broader society, as scientific data and information are made openly available online. The focus of this project was on computer-mediated or computational scientific knowledge discovery, taken broadly as any research processes enabled by digital computing technologies. Such technologies may include data mining, information retrieval and extraction, artificial intelligence, distributed grid computing, and others. These technological capabilities support computer-mediated knowledge discovery, which some believe is a new paradigm in the conduct of research. The emphasis was primarily on digitally networked data, rather than on the scientific, technical, and medical literature. The meeting also focused mostly on the advantages of knowledge discovery in open networked environments, although some of the disadvantages were raised as well.

The workshop brought together a set of stakeholders in this area for intensive and structured discussions. The purpose was not to make a final declaration about the directions that should be taken, but to further the examination of trends in computational knowledge discovery in the open networked environments, based on the following questions and tasks:

1. Opportunities and Benefits: What are the opportunities over the next 5 to 10 years associated with the use of computer-mediated scientific knowledge discovery across disciplines in the open online environment? What are the potential benefits to science and society of such techniques?
2. Techniques and Methods for Development and Study of Computer-mediated Scientific Knowledge Discovery: What are the techniques and methods used in government, academia, and industry to study and understand these processes, the validity and reliability of their results, and their impact inside and outside science?
3. Barriers: What are the major scientific, technological, institutional, sociological, and policy barriers to computer-mediated scientific knowledge discovery in the open online environment within the scientific community? What needs to be known and studied about each of these barriers to help achieve the opportunities for interdisciplinary science and complex problem solving?
4. Range of Options: Based on the results obtained in response to items 1-3, define a range of options that can be used by the sponsors of the project, as well as other similar organizations, to obtain and promote a better understanding of the computer-mediated scientific knowledge discovery processes and mechanisms for openly available data and information online across the scientific domains. The objective of defining these options is to improve the activities of the sponsors (and other similar organizations) and the activities of researchers that they fund externally in this emerging research area.

The Future of Scientific Knowledge Discovery in Open Networked Environments: Summary of a Workshop summarizes the responses to these questions and tasks at hand.

From reader reviews:

Deanna Ratliff:

Spent a free time and energy to be fun activity to try and do! A lot of people spent their free time with their family, or their very own friends. Usually they doing activity like watching television, planning to beach, or picnic in the park. They actually doing ditto every week. Do you feel it? Do you want to something different to fill your own personal free time/ holiday? Can be reading a book may be option to fill your cost-free time/ holiday. The first thing that you ask may be what kinds of book that you should read. If you want to try look for book, may be the e-book untitled The Future of Scientific Knowledge Discovery in Open Networked Environments: Summary of a Workshop can be excellent book to read. May be it is usually best activity to you.

Joseph Bolden:

Within this era which is the greater man or woman or who has ability to do something more are more special than other. Do you want to become among it? It is just simple solution to have that. What you are related is just spending your time not very much but quite enough to experience a look at some books. One of the books in the top collection in your reading list is actually The Future of Scientific Knowledge Discovery in Open Networked Environments: Summary of a Workshop. This book which is qualified as The Hungry Slopes can get you closer in turning out to be precious person. By looking upward and review this book you can get many advantages.

Samuel Tapp:

As we know that book is essential thing to add our understanding for everything. By a publication we can know everything we really wish for. A book is a list of written, printed, illustrated or maybe blank sheet. Every year has been exactly added. This guide The Future of Scientific Knowledge Discovery in Open Networked Environments: Summary of a Workshop was filled about science. Spend your time to add your knowledge about your research competence. Some people has different feel when they reading any book. If you know how big advantage of a book, you can sense enjoy to read a publication. In the modern era like today, many ways to get book that you wanted.

Katie McCants:

What is your hobby? Have you heard that question when you got students? We believe that that question was given by teacher on their students. Many kinds of hobby, Everyone has different hobby. And you know that little person similar to reading or as reading through become their hobby. You must know that reading is very important and book as to be the thing. Book is important thing to increase you knowledge, except your personal teacher or lecturer. You find good news or update concerning something by book. Amount types of books that can you take to be your object. One of them is The Future of Scientific Knowledge Discovery in
